ADJUSTMENT

ADJUSTMENT OF AUTO-RETURN

Remove the turntable to set the tone arm in the reset position (1). Set the pawl of the small gear of the center shaft in the position shown in attached drawing. Besides, lower trip lever M6 and trip lever M8 pushed toward the arrow marks A and B, respectively.

Turn shaft assy. M2 toward the arrow mark C to set so that the convex part of pinion and the tip of claw for the engagement lever M5 contact each other (arrow mark a). Next, move the tone arm (toward arrow mark D). When the distance between the center shaft of turntable and the needle tip becomes $64 +1/-0.7$ mm (2), insert a blade screwdriver into part C, and adjust by turning it clockwise or counterclockwise so that the tip of trip lever M8 begins to contact with lower trip lever M6 (arrow mark b). Finally put on the turntable, and check the performance of auto-return.

ADJUSTMENT OF STYLUS HEIGHT

Setting the record disk in place, raise the tonearm lift lever.

Bring the tonearm to above the disk, and insert a screwdriver into the "stylus height adjust" hole (see drawing for ADJUSTMENT OF AUTO-RETURN) and turn it right or left until the distance between the disk and stylus becomes 8 ± 1 mm.

ADJUSTMENT OF TURNTABLE SPEED

Set the PITCH CONTROL in the middle position, place the stroboscope pattern on the turntable platter.

Set the speed select switch into the desired speed.

33 rpm Adjust the SVR900 so that the graduates on the stroboscope pattern seems to be in stop.

45 rpm Adjust the SVR901 similarly.

ADJUSTMENT OF LEAD-IN POSITION

(1) Load with test record RG-325.

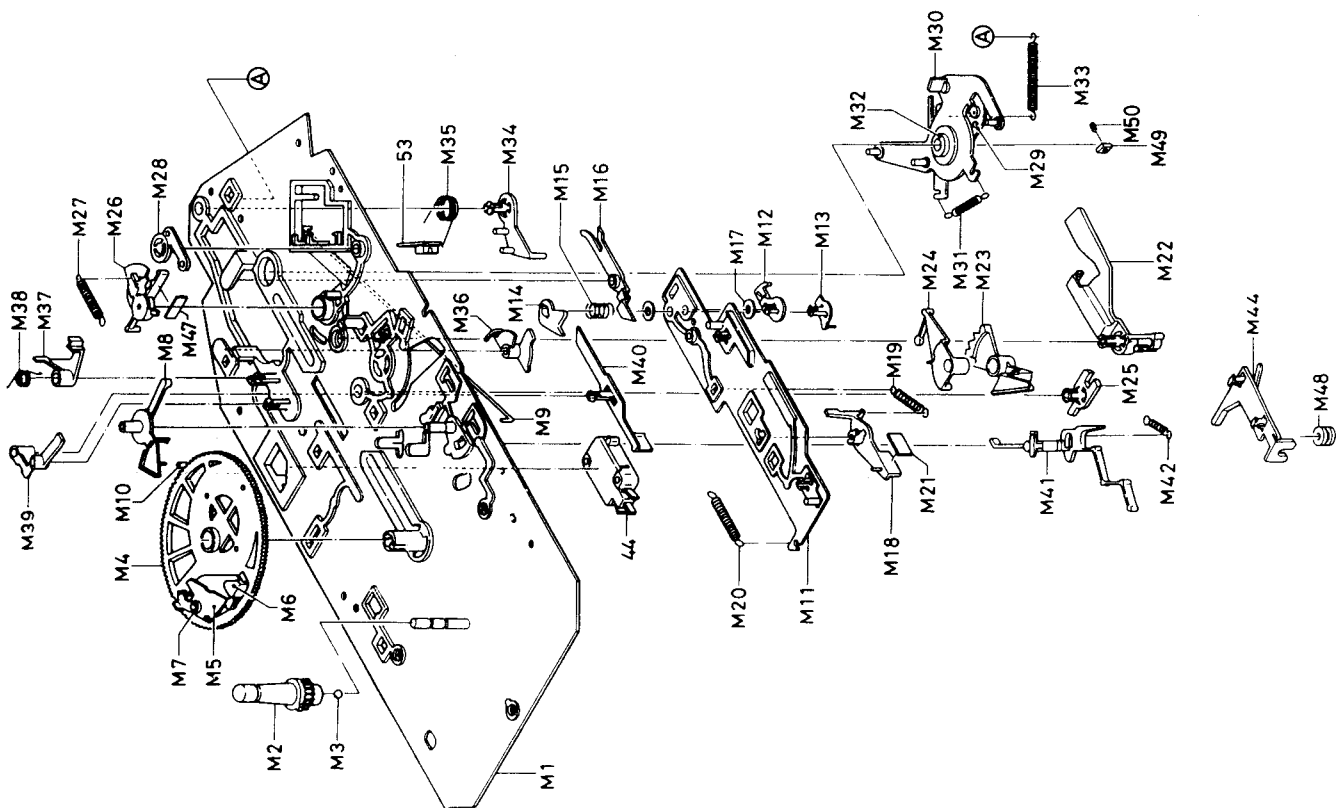

(2) Set speed selector to 33.

(3) Press start/stop button to set in play mode. If the sound output from the record is telling other figure than 20 to 22, return the tone arm to the tone arm rest, and insert screwdriver in to adjusting hole (3) and adjust.

PARTS LIST

PRODUCT SAFETY NOTICE

Each precaution in this manual should be followed during servicing. Components identified with the IEC symbol \triangle in the parts list and the schematic diagram designate components in which safety can be of special significance. When replacing a component identified with \triangle , use only the replacement parts designated, or parts with the same ratings of resistance, wattage or voltage that are designated in the parts list in this manual.

Leakage-current or resistance measurements must be made to determine that exposed parts are acceptably insulated from the supply circuit before returning the product to the customer.

CAUTION : Regular type resistors and capacitors are not listed. To know those values, refer to the schematic diagram.
